

Benefits of Clearspan Fabric Structures

For disaster relief housing

In a matter of weeks, a fabric structure village can be manufactured, delivered, and erected.

Poly cover prevents the spread and growth of bacteria and fungus

HDPE scrim with LDPE coating is inert, and contains no plasticizers. Therefore, there is nothing to provide food for the survival of micro-Organisms such as fungi and bacteria!

UV-resistant polyethylene has translucent and reflective qualities that improves air quality and temperature stabilization

Clearspan Housing Structures, the most logical solution

-2 production facilities located in strategic locations for the quickest turnaround on production, and prompt ground/sea/air shipping.

-Clearspan is the only Tension Fabric Building manufacturer that can expedite large quantities of structures at a moments notice.

A Clearspan structure uses a proprietary cover attachment system and anchoring system which allows for simple installation, and a significant life expectancy. We have the best and longest warranty in the industry.

Easy and inexpensive to convert to a greenhouse

-Buildings can quickly be converted to a fully functional greenhouse, simply by changing out the cover material

-6 mil film (optimal for growing) covering can be purchased for as little as \$35 (on 20' long units)

-ANY and ALL Clearspan Structures can be retrofitted to a fully operational greenhouse
