

"Building of 1000 uses"

April 5, 2009

To whom it may concern,

Potad International Consulting LLC and **ClearSpan International** are the sole provider, manufacturer and retailer of the **ClearSpan Disaster Housing Structures**, and **Clearspan Community Structure** (for large scale housing, churches, latrines, cafeterias, etc.) for Haitian disaster relief.

As a note, these systems include peripheral components and features that are exclusive to the ClearSpan line. This includes but is not limited to premium Allied Gatorshield Structural Steel (3x's galvanized) positioned with four or five foot rafter spacing, and a superior fastening system for the Nova-Shield 2 Armorkote primary covering. The cover is held on with rated, woven strapping over structural steel, and heavy duty ratchets, while others on the market are fastened with rope and grommets. Clearspan buildings offer the longest warranty on the cover material in the industry. The buildings use redundant anchoring, making them capable of withstanding hurricane winds.

Clearspan International is capable of mass production and delivery for disaster relief, and produces more Tension Fabric Structures than any other manufacturer in the world. Clearspan Tension Fabric Buildings represent 80% of all fabric structures sold in the United States.

Clearspan Disaster Housing Structures and Clearspan Community Structures can be easily assembled by the end user with common hand tools and a step ladder. While most buildings are left in place for many years, they are completely portable.

The above listed benefits and features make the Clearspan Tension Fabric line preferential to federal, state and municipal projects. We also are the preferred supplier to all branches of the Armed Services.

If your inquiry requires further discussion or documentation, please let me know.
